

ADDENDUM THEATER SET UP: PARKZAAL

Due to the renovation of the Stadstheater, performances are programmed in Musis.

The Parkzaal serves as the Main Hall and the Lifting Installation was renovated and expanded to facilitate performances that are normally held in the theater. Unfortunately we don't have a full theatre set-up at our disposal. We are always available for questions and suggestions to make your performance as good as possible in our venue.

To create better sight lines, a tribune/stand is placed during the theater period (x-weeks contiguous / season), creating an ascending auditorium about 10 meters from the front edge.

Please contact our events department if you want to know which set-up is used at your performance.

To make the stage picture look like a stage image, blocking is installed, which consists of:

- A frame of legs and a frieze, standard opening is 13 meters and height frieze is 7 meters.
(this frieze hangs in section 1 and is adjustable in height)
- Behind it, four sets of legs with an opening of 13 meters hang on their own suspension, which means that all other pulls (except pull 1) and 20 tackles can be used freely to hang light or decor. Unfortunately, we do not have a front cloth in the Parkzaal.
- Behind the frame, a truss hangs from the 1st row of hoists that serves as a portal.
- The dimensions of the pulls, lifting points and an overview of the front light can be found in the general technical data of the Parkzaal.
- A control area has been set up in the room from which the light or audio can be controlled.

To help you understand the story described above, there are photos available that give an impression of the theater setup in the Parkzaal.

If you have any questions after reading all available information, please contact our events department (+31) (0)26- 3720710, Mail: events@musis.nl also for contact with the tech department.

We are happy to help you organize the performance in our temporary theater as beautifully as possible.

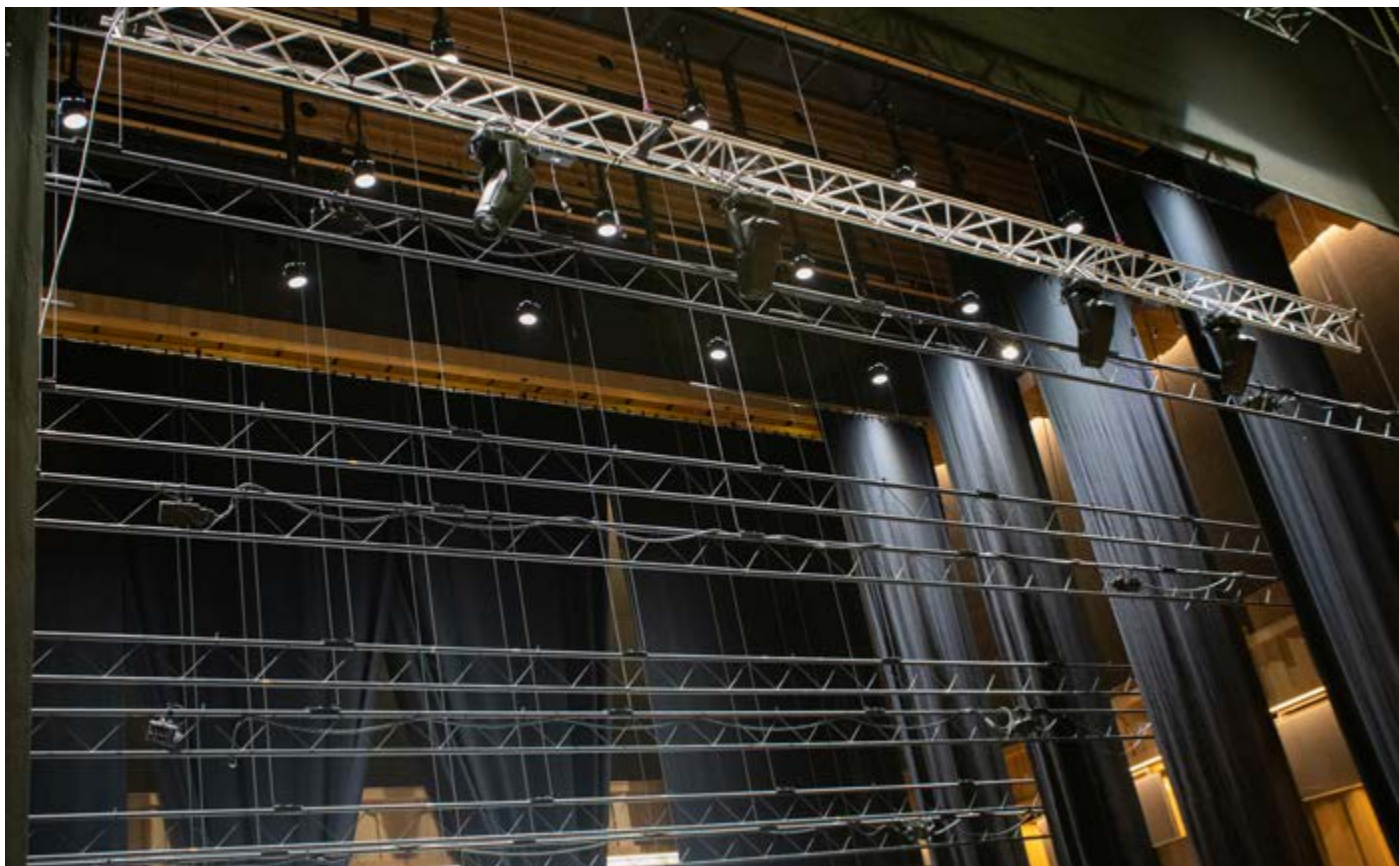

Kind regards,
Muis technology team
